

ALUMINUM PACKAGING

There's a lot to love about our new aluminum containers

Mastering the art of the aluminum. For over 106 years, J.L. Clark has pioneered in the fabrication and decorating of steel containers for packaging. Now, we're applying these same capabilities to containers made from aluminum. Tooling for the first six aluminum structures, all with different design features and/or dimensions, has already been developed, making it much simpler, faster and cost-effective for customers to begin benefiting from aluminum packaging. J.L. Clark can also apply all of its resources, capabilities and experience to best meet the special requirements of aluminum container fabrications and decorating.

Perfect for water-based product applications. J.L. Clark aluminum containers are perfect for almost any water-based product: hair care...moisturizers... and many other health and beauty products. Unlike steel, aluminum doesn't require the thermoformed cup or other barrier to protect it from corrosion. So it's simpler, easier and more economical to package almost any water-based product.

'Lighter' means less environmental impact. What else will you like about aluminum? It's great for the environment. It's inherently lighter than steel, so each and every container is helping to make a positive impact on your energy costs and greenhouse gas emissions downstream by cutting shipping weight. It's also 100% recyclable, making every container as easy for you or the consumer to recycle as the typical aluminum soda can.

**You'll love our aluminum...ready
to get started?**

**All Fabricated from
100% Recyclable Aluminum!**
